No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

DNA sequence of hu 88421nt genomic DN Spinocerebellar at

Rhizobium species Rhizobium species

culturing its gene-transformed host cells, useful for producing L-sorbose or 2-keto-L-gluconic acid as an intermediate in L-ascorbic Gluconobacter oxydans derived D-sorbitol dehydrogenase obtainable by acid production

Claim 9; Page 60-63; 72pp; Japanese

CalbH: AAR2172) and to the gene encoding it (AAA97430). SLDH has a molecular weight of about 54 Kba and catalyses the conversion of D-sorbitol into L-sorbose using NaD+ as a co-enzyme. SLDH specifically catalyses the oxidation of sorbitol, mannitol and arabitol, but does not act on xylitol, ribitol, inositol and glycerol. The invention also act on xylitol, ribitol, inositol and glycerol. The invention also concompasses expression vectors and host calls comprising the concombinater oxydans SLDH gene, and the recombinant production of SLDH. The invention further relates to a method for preparing L-sorbose by contacting the recombinant SLDH with D-sorbitol; a process for producing 2-keto-L-gluconic acid by contacting recombinantly produced sorbose dehydrogenase and/or sorbosone dehydrogenase with L-sorbose; and a propersion from 2-keto-L-gluconic acid or its alkaline earth metals salts by conversion from 2-keto-L-gluconic acid. SLDH is useful for producing L-sorbose or 2-keto-L-gluconic acid as an intermediate in L-ascorbic invention relates to Gluconobacter oxydans D-sorbitol dehydrogenase production. The present sequence represents the Gluconobacter

METH1 and METH2 have been found to be potent inhibitors of angiogenesis both in vitro and in vivo. They can be used for treating cancer and other disorders related to angiogenesis including abnormal wound healing, inflammation, rheumatoid arthritis, psoriasis,

           macula degeneration, haemangiomas, and arterial-venous malformations. They may be useful in treating deficiencies or disorders of the immune system, by activating or inhibiting the proliferation, differentiation, or mobilisation (chemotaxis) of immune cells. The etiology of these immune deficiencies or disorders may be genetic, somatic, such as cancer or some autoimmune disorders, acquired (e.g. by chemotherapy or toxins), or infectious. They can also be used to treat inflammatory conditions, both chronic and acte conditions. The products can also be used for detection and diagnosis. AAX32002 to AAX320080, and AAY49503 to AAX49511 represent sequences given in the exemplification of the present

                                                                                                                                                                                                          The present invention relates to human METH1 and METH2, (ME for metalloprotease and TH for thrombospondin; see AABS0002 and AABS0003). The present sequence is an expressed sequence tag (EST) for METH. METH can be used for inhibiting angiogenesis in an individual, and for treating cancer, benign tumours, an ocular angiogenic disease. Theumatoid arthritis, psoriasis, delayed wound healing, endometriosis, vasculogenesis, granulations, hypertrophic scars, nonunion fractures, scleroderma, trachoma, vascular adhesions, myocardial angiogenesis, oronary collaterals, cerebral collaterals, arteriovenous malformations, ischaemic limb angiogenesis, Osler Webber syndrome, plaque neovascularisation, telangiectasia, haemophiliac joints, angiofibroma, theromosclarosclarosis. METH can also be used in birth control. METH can also be used in birth control. METH can also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GCATCTTGTTGATCCGGCCATCGCATCGTTTCCATGACGATCACGGAAGGCGGCTACAA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          652
The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, in the examplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CGGAAGGCGCCTACAACATCAACGAGACGGACGGTGCGTTCGATCTGGAGAATGCGGCAG

ARATALISO TO ANALYJSO THOOGHOUSE CHE COLYMBOATE CHAIN STUTE ANALYJSO TO ANALYJSO THOOGHOUSE CHE COLYBRACKER TO ANALYJSO THOOGHOUSE THE CALL ANALYSO TO ANALYJSO THE C. Glutamicum SNP gene can be used in vectors (II) for expression in host cells and production or modulation of production of fine chemicals, such as, an organic acid, a protechnogenic or nonproteinogenic amino acid (preferred), a purine or pyrimidine base, a nucleoside, a uncleotide, a lipid, a saturated or unsaturated fatty acid, a diol, a carbohydrate, an aromatic compound, a vitamin, a coffactor, a polyketide, or an enzyme. The presence of (I) or SMP proteins (II) encoded by them are used for diagnosing the presence or activity of corpebacterium diphtheriae in a subject. (I), (II), (III) or host cells containing them are used to map genomes of organisms related to nost cells in evolutionary studies, in determining SMP protein regions required function, in modulating sMP protein activity, in modulating the metabolism of sugars, and in modulating high-energy molecule production in a cell (i.e. ATP, NADPH).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       747

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention provides a number of nucleotide and protein agequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and manalysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacterium activity a nomologue of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium, saccharides and organic acids, particularly Liysine. The present sequence is a nucleic acid described in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         867
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               747
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            807
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Note: The sequence data for this patent did not form part of the printe specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GCAAGAGCACGGTGCGCGTCATGGGCGCGCGCGTGACTATCTGCTTGCCCCGGCCGATC
